ABOUT US

Décors Véronneau is a Quebec-based company that has been established for over 35 years. We specialize in high-quality artificial flowers, plants, and custom projects for residential and commercial spaces.

Our impressive inventory includes vases, planters, garden accents, and holiday essentials. Our showroom is located in Laval.

Unique and handmade products!

Renowned for our wide range of custom trees—handcrafted with natural trunks and artificial foliage—we also specialize in small and large-scale plant walls and unique floral creations.

Our design team is specialized in creating unique concepts for commercial spaces.

Our artificial plant walls can cover vertical or horizontal walls, ceilings, and confined spaces. They can also incorporate wood inserts to create modern geometric designs.

TRELLIS WALL

OUR MOST COST-EFFECTIVE PLANT WALL

- Possibility of adding a finishing frame ;
- Option to integrate foliage, succulents and more ;
- The foliage of the trellis is **guaranteed for 5 years** against discoloration, making it a durable and economical choice ;
- Perfect for **outdoor** installations.

From
\$15/sq.ft.
Includes a black painted
wood base

MANUFACTURING STEPS

- 1 Large wooden panel (painted black) used as a base for the plant wall ;
- 2 Addition of the expandable lattice panel ;
- 3 Addition of a finishing frame ;
- 4 Addition of artificial plants fixed by hand ;
- 5 Vaporization of our cleaning solution on the entire wall to prevent dust from adhering.

GREENERY WALL

ENTRY LEVEL

Entry-level plant walls offer a natural look due to the added vegetation and foliage sparingly placed on the artificial moss base. You can opt to cover large bits of the moss with various greenery for a striking overview or you can choose less foliage for a complementary look.

- Large choice of foliage, succulents and more ;
- Possibility of adding a finishing frame ;
- No watering required: plants keep their original appearance and do not need to be pruned and/or replaced over time, which makes it an economic and sustainable choice.

MANUFACTURING STEPS

- 1 Large wooden panel serving as a base (background) of the plant wall ;
- 2 Styrofoam panel ;
- 3 Addition of urethane to create volume and bumps ;
- 4 Green moss mat ;
- 5 Addition of a finishing frame ;
- 6 Addition of artificial plants fixed by hand ;
- 7 Vaporization of our cleaning solution on the entire wall to prevent dust from adhering to the wall.

GREENERY WALL

HIGH RANGE

The high-end plant walls offer a dense and lush look that does not show the artificial moss base. They create a striking effect at first glance.

- Large choice of foliage, succulents and more ;
- Possibility of having a finishing frame ;
- No watering required: plants keep their original appearance and do not need to be replaced over time, making it an economic and sustainable choice.

From
\$80/sq.ft.

Includes a black painted wood base

MANUFACTURING STEPS

- 1 Large wooden panel serving as a base (background) of the plant wall ;
- 2 Styrofoam panel (painted black) ;
- 3 Addition of a finishing frame ;
- 5 Addition of artificial plants fixed by hand (these cover entirely the black styrofoam surface)
- 6 Vaporization of our cleaning solution on the entire wall to prevent dust from adhering to the wall.

FIRE-RETARDANT PLANT WALL

NON-FLAMMABLE COMPONENTS

Fire-retardant plant walls are made of non-flammable elements that make them safe in the event of a fire. We offer a range of plants, outdoor trellises, and certified artificial moss mats, all made from inherent fire-retardant materials that reduce the spread of fire.

IFR foliage offers lifetime protection. Our fire-retardant plants pass the National Fire Protection Association 701 tests and ASTM E84-95.

Firesafe® fire-retardant foliage certified by ASTM-84 Class A standards for flame and smoke resistance. Spread index: 5.

The standard level must be at least 25 or lower to achieve Class A.

[Get more details on our certification](#)

MANUFACTURING STEPS

- 1 Large fire-retardant plywood panel used as the base for the plant wall;
- 2 Fire-retardant black paint layer applied to the plywood panel;
- 3 Fire-retardant artificial moss mat;
- 4 Addition of a fire-retardant plywood finishing frame, painted with fire-retardant paint (black or white);
- 5 Installation of fire-retardant plants by our experts using metal pins.

PRESERVED MOSS WALL

A 100% ORGANIC AND DURABLE CHOICE

Preserved moss is a natural moss that had undergone a preservation process to keep it fresh – both in appearance and color – without the need for water, sunlight or maintenance of any kind.

- 5 options of moss available for **indoor use only**;
- Possibility to add a finishing frame

THREE ESSENTIAL ELEMENT TO KNOW BEFORE CHOOSING THIS PRODUCTS

Humidity level

Since the flexibility of preserved moss depends on the humidity level in the room, and it becomes fragile as it dries, it's best to use it in low-traffic areas where it can't be touched. A humidity level of 50% is recommended in the room where it will be installed.

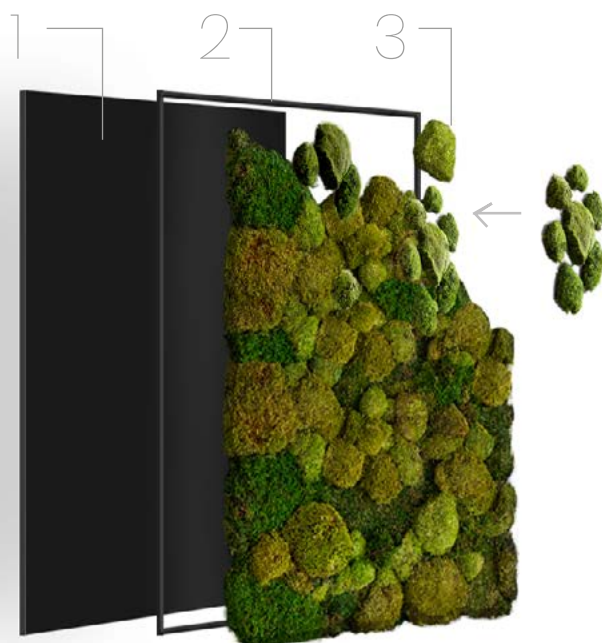

Direct light

Preserved moss should not be exposed to direct sunlight or placed in a space with too much light, as this may alter its original appearance and color. It is therefore preferable to install it away from windows to avoid any change in the appearance of your moss wall.

Natural plant product

Before opting for this option, note that preserved moss is a botanical product, which means that it has a unique natural odor that is present upon receiving it. This is quite normal and tends to fade gradually over time.

MANUFACTURING STEPS

- 1 Large wood panel (painted in black) serving as a base for the plant wall;
- 2 Addition of a finishing frame;
- 3 Installation of the moss by our experts.

Options of moss available:

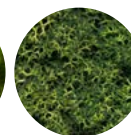

Sheet Moss

Pole Moss

Mood Moss

Reindeer Moss

Lycopodium Moss

TAKE INSPIRATION FROM THESE EXAMPLES:

PVC, Saint-Arneault

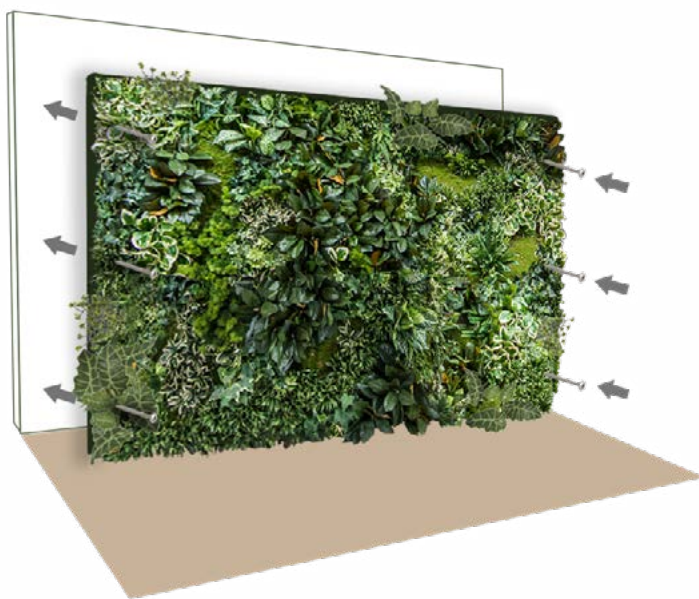

LED Neon, Bellucci

Aluminum, Makao

LED Neon, Terrasse Belvu

QUICK AND EASY INSTALLATION

Since the green wall is manufactured on pre-fabricated panels in the workshop, its installation is fast and efficient.

A single visit is enough for the complete installation of the greenery wall.

The panels will be fixed to the wall using several anchors located behind the panels, and their tips will be concealed by the foliage.

CARE INSTRUCTIONS:

Artificial plant walls require very little maintenance. Each year, simply remove dust with a dryer and spray with an artificial plant cleaner to restore their original shine.

UV protection spray should be sprayed annually on plant walls exposed to sunlight through a window.
